TITLE : PRINTER

ABSTRACT : PROBLEM TO BE SOLVED: To normally start a printer or to precisely execute a job by reducing a load on a network.

SOLUTION: A printer 100 starts connection with a server 110 by inquiring to servers 110 and 120 on the network. When the server 110 can not be connected because of the turned off power source, etc., at this time, the transmission of a packet by an inquiry is interrupted. Then, during the interruption of transmission, the printer 100 comes into the receiving state of an SAP packet to be broadcasted at the network and at the time of receiving SAP from a desired server 110, transmits a packet by an inquiry again in order to be connected with the server 110. Then, connection to the server 110 is succeeded, the printer 100 refers to a printer object describing set information of a printer generated by the server 110 to start the printers.
